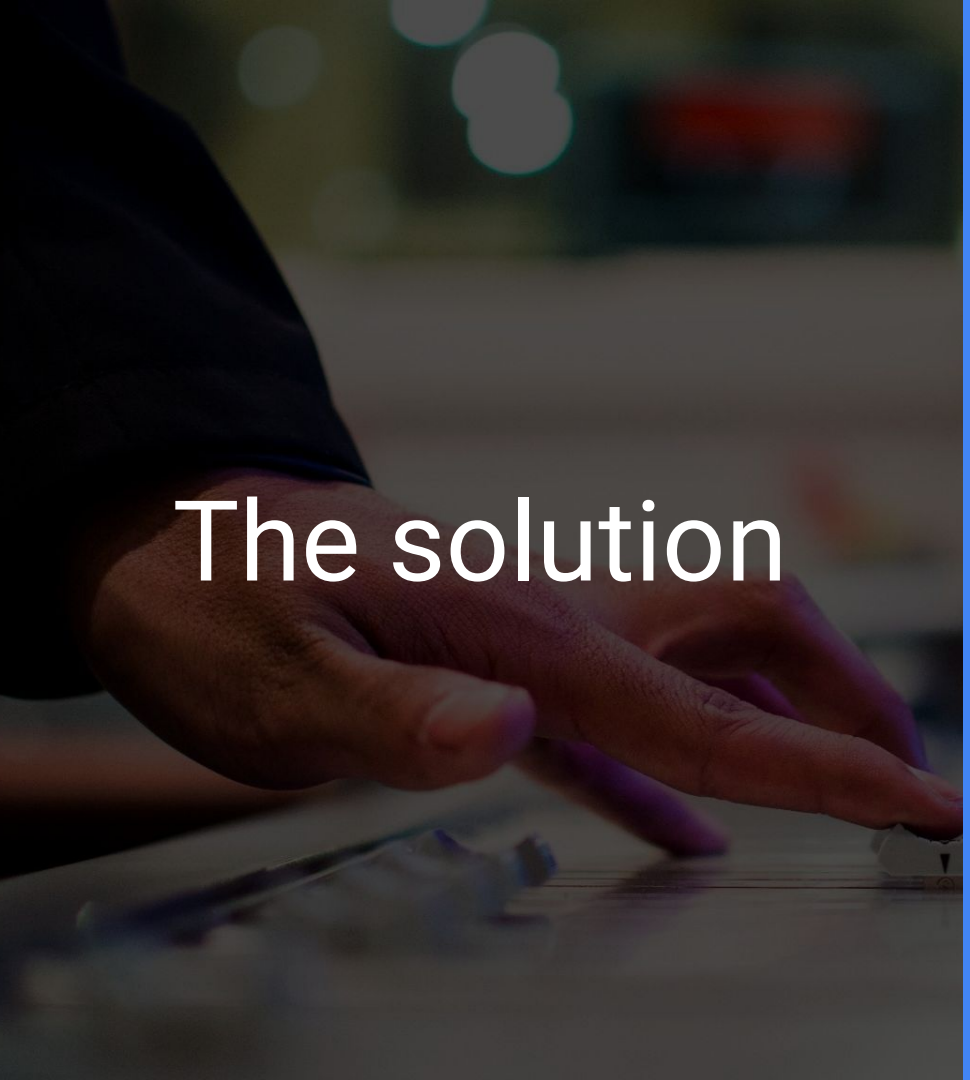
You click, we deliver

The problem

There are a lot of delivery solutions, but each has a few advantages and more disadvantages

- Expensive
- Not secure
- Limited by time or location
- Bad organization
- Slow process
- Lack of informations
- Bad customer service

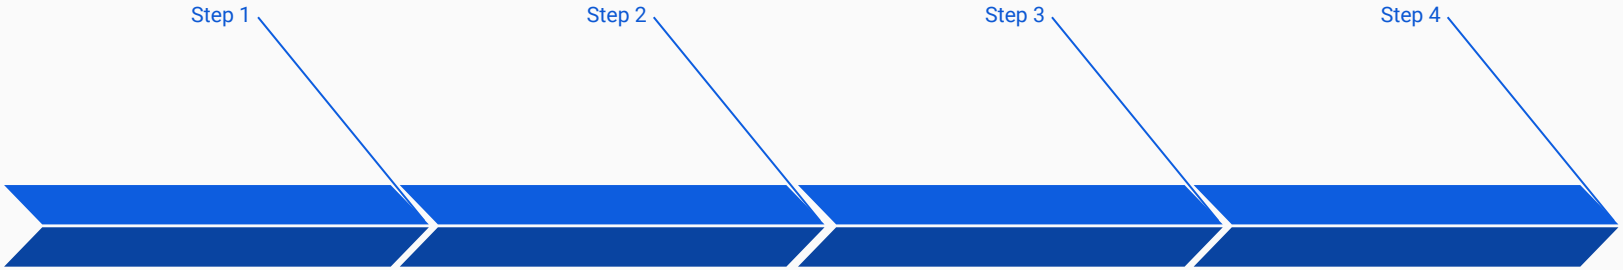


The solution

Platform that provides delivery service by using multiple partners to create a network, in which We don’t own the logistics, which means we decrease the costs and control the size of operations based on demand easily. Also we have access to all the informations and data to assist our partners and clients in real time.

How it works

The Platform optimize the user experience by saving him time, money and effort.



location

The user identify his location and the location he wants to send the packages to, and can also add the informations of the receiver to be contacted later

Pickup

One of our agent came to pick the package from the client and take it to the partner who will be chosen based on the destination and availability

Partners

The partner then receive the package and take it to the destination that been identified before

Delivery

Another agent in the destination city receive the package with all the necessary informations about the destination, contact the receiver to check availability and verify the location and time of delivery.

Value proposition

WDS combined all the advantages of the competition:
